AI Software Development

I'm very active on LinkedIn. Let's connect!

What I do

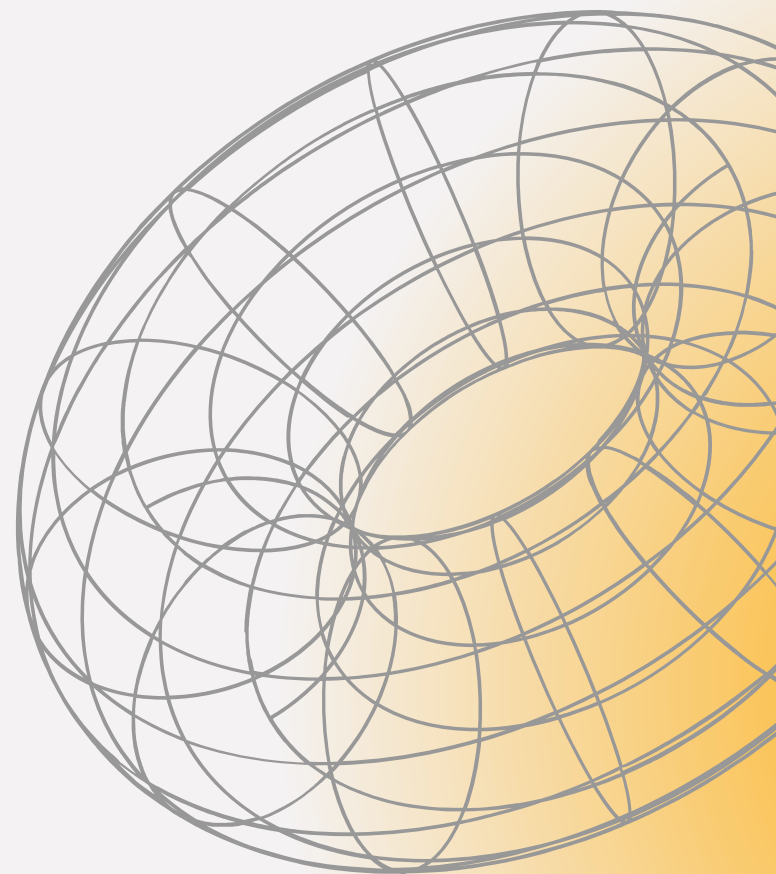

- Full stack software development and frontend design
- AI integration and model building
- Analytics

"There are those who need to be told what to do, and there are those who figure it out with grit."

My Story

Ever since designing in paint app as a kid, I have always loved to create things. I was always building little businesses with friends for fun.

When I was a teenager, a rare genetic trait caused me to wear a brace around my chest and caused me chronic pain and health issues for years. I had the grit to engineer my body back into health through extensive self therapy. I have a mind for logic and creativity and have applied it in the most dire circumstances.

Pied in face as Data Analyst

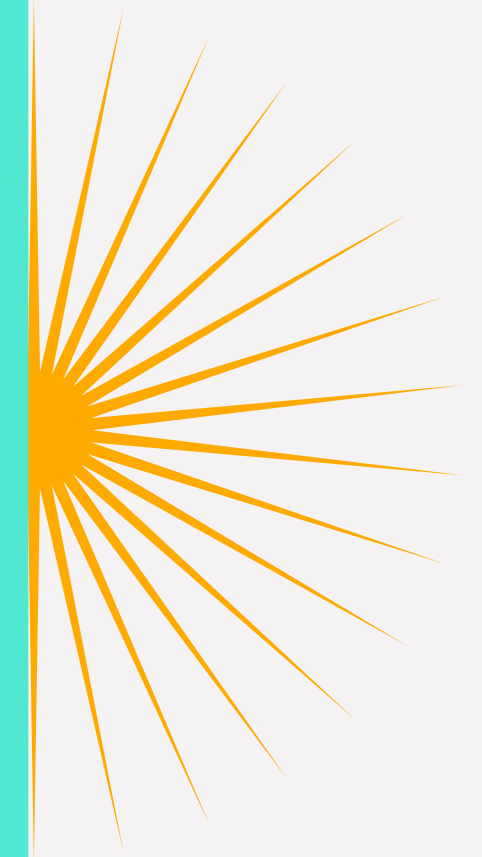

Software Development & Data Science

Since High school I wanted to work in technology and learn as much as I could about software development and AI (even before it was cool).

The past 6 years, I did software development, Arduino projects and explored entrepreneurship in my free time.

I also learned about sales and data analytics through work experiences and a data science bootcamp with Flatiron School.

I got to build software and apply Machine learning models to improve lead time predictions while working at The Distribution Point, and it made me so happy to finally engineer on the job.

In 2022, I made the move from parochial Birmingham Alabama, to Austin Texas (hopped on the bandwagon.)

Not one to spend my days at home, I jumped straight into the tech scene- participating in pitch competitions, AI meetups, and just about anything that caught my interest.

The home base and epicenter of my network has become the esteemed Capital Factory coworking space.

Austin Texas

Ping Pong break at Capital Factory

Full Stack Software Development

ReactJS

MongoDB

MERN

Python

I've contracted for a few jobs odd tech jobs since coming to Austin including:

- Building Microsoft PowerApps for 365Consulting
- 2 freelance website building clients
- AI software RnD for a consulting company looking to automate their processes (still doing it.)

To upskill as an engineer, I decided to do UT Austin's full stack web development bootcamp. That challenged me, but I came out a well rounded developer with frontend skills added to my arsenal.

I was voted as "Most likely to inspire other developers" and "AI expert" by my peers.

AI focused

The Distribution Point

Python process automation and web scraping (Selenium)
Built machine learning models to improve accuracy of lead time predictions (scikit-learn)

Jan, 2021

Aug, 2021

Built for a branch of Massage Envy, this sent confirmations through Twilio text message API and used Selenium to update state in Meevo, the store's appointment management software

Appointment confirmation automation

Apr, 2023

Web application with OpenAI API integration that helps you plan the perfect date. Built as a group project In UT Austin full stack bootcamp

Planned Perfection

MERN stack JS canvas based video game with minigames and NPC dialogue driven by AI (OpenAI API)

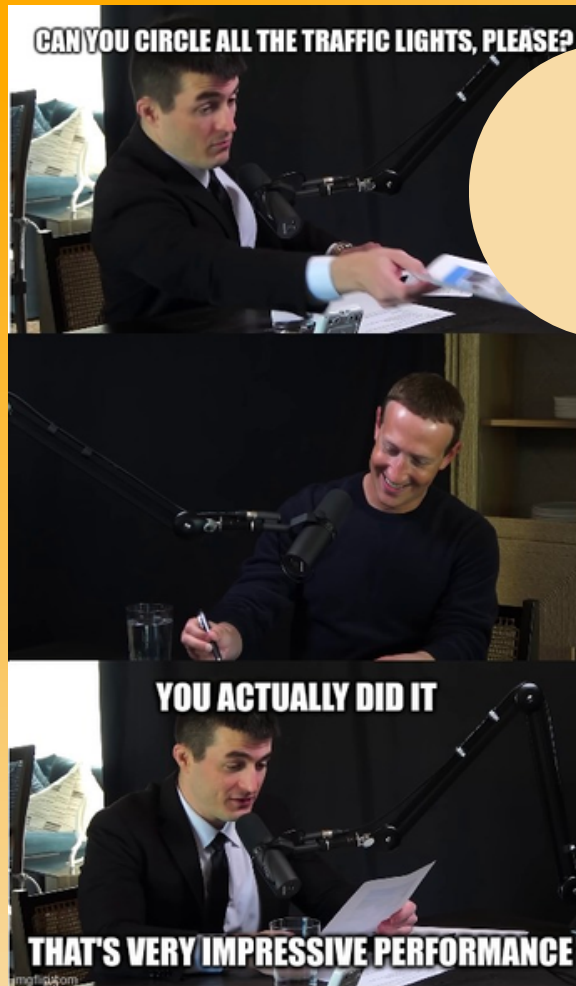

June, 2023

Traditional automation techniques combined with LLM function triggering and semantic search to automate dynamic tasks in ERP system (Selenium, Tesseract OCR, OpenAI API)

Ongoing

Simulation Hopper

What's next for me?

Inspired by famous blogger Seth Godin's encouragement for people to make a blog post every day, I began sharing what i'm learning every day on LinkedIn. Let's connect!

I'm available for online or face-to-face meetings to discuss your project. Let's explore how I can assist you technically or connect you with my network.

I want to make myself useful to you by applying my full stack software development and state-of-the-art AI integration expertise. AI software development is not just a job but an obsession. I read, listen, and go to meetups on the subject.

I have exemplary personal habits and work hard. If I work with you, your company's success will be my personal mission in life.

I am open to both freelance and full time work as an engineer or PM. I will thrive if your company is relatively small because I like to shoulder a lot of responsibility.

Thanks
